EVAC Gives Emergency Responders Immediate Access To Gated Properties

If you're an emergency responder in Southwest Florida, you may have come across the difficulty of gaining immediate access to a gated community or private residence during an emergency call. That situation can be a thing of the past with EVAC, Emergency Vehicle Access Control.

This affordable system gives firefighters, law enforcement, medical personnel and other first-responders quick access to gated properties with the push of a button. EVAC is the most secure device we have found to help residents in their time of need. And for under \$200, it's a no brainer.

A Single Remote Per Vehicle Allows Access To All Suitably Equipped Locations

Business, Industrial, Airports and Private Residences!***

Emergency Vehicle Access Control

How It Works

EVAC is a radio control system designed for emergency service providers. When a fire truck, ambulance or law enforcement vehicle arrives at a gated entry the operator simply presses the Emergency Vehicle Access Control transmitter and is granted access to the property. No sirens, keys or fumbling with Knox boxes and keys.

Law enforcement personnel in particular are pleased with EVAC because they do not have to sound their vehicle's siren when responding to a burglary call or other dispatch where the "bad guys" would be tipped off.

Gated communities are required to install a receiver on their gate at minimal cost to work in conjunction with the transmitter provided to the emergency service provider.

Emergency Personnel

We work with county officials to outfit all vehicles with remotes, and will help to mandate the use of the EVAC system for all gate owners in your community. The transmitters are on a private code and sold only to emergency service providers, never to the general public. We even keep detailed records of units that purchase remotes.

Call us today for information on how your unit can gain access to gated communities, private homes, and businesses with the push of a button.

Gate Owners & Residents

If you live in a gated community or other residence behind a secure entry, having an EVAC system will give you and your neighbors peace of mind. You'll know that first responders will have quick access to your home should you need immediate help during an emergency. EVAC can be used on community, private or commercial gates and installs quickly and out of sight. One of the best benefits is that the EVAC receiver comes at a one-time low cost — less than \$150. That's convenient, affordable access that can save time when every second counts.
